

# Equipment Audit

## Importance

**Modern infection control standards are improving constantly in hospital, nursing and other care residential environments. With these changes rises the importance of auditing processes of mattresses and other equipment.**

Thankfully, experienced groups within the healthcare system manage the control and prevention of infections.

At Delivered Health Solutions we couple this experience with our professionally trained teams creating high-standard audit services and provide full records of all audited equipment.

Here at Delivered Health Solutions we are proud to continue our educational standards in light of improved and ongoing guidelines, ensuring your regular compliance with the appropriate governing body.

## How it Works

Our teams will meet with the relevant members within your organisation and put together detailed planning organisation and logistic plans. This includes partnering with licensed specialist waste disposal teams, who recognise the importance of managing contaminated waste.

After fitting together a detailed plan we will perform a successful audit at your sites. The Equipment audit outcome is presented in both digital and hard copy formats which your Trust or home can keep on record and act in accordance with the Care Quality Commission or other appropriate governing bodies.
